Power*Share™ Recognized as Leading Solution for Solar Monitoring

*Greentech Media report puts Power*Share among the leaders after only 2 years*

In the 2 years that Power*Share has been available for remotely monitoring solar power generation, it has become one of the leading solutions worldwide, according to the results of a study recently undertaken by GreenTech Media.

The strength of Power*Share, and what is fueling its sudden appearance on GreenTech Media's list, is its hardware-independent architecture. In an environment where PV technology is evolving rapidly and equipment vendors come and go, owners do not want to be dependent on their proprietary monitoring solutions only to find they are unsupported and do not integrate with each other.

Power*Share is built on the PI System and is delivered as a web-based service. PI provides a rock-solid, highly scalable, unifying platform for Power*Share to provide the owner and operator alike with insight into any asset and quickly address issues that impact the bottom line. Layered on top of PI, Power*Share includes solar-specific dashboards and reports, available and fully supported 24/7.

These unique advantages mean that Power*Share is already being applied to over 300 MW of solar capacity in North America and Europe.

About Industrial Evolution

Founded in 2000, Industrial Evolution was an innovator in offering Data-as-a-Service to the industrial market. We collect real-time process data from systems and devices, and make it available securely via the internet.

In January 2016, Yokogawa Electric Corporation announced the acquisition of Industrial Evolution to strengthen its provision of advanced solutions to the process industries. The acquisition of Industrial Evolution, a provider of cloud-based plant data sharing services, was carried out through Yokogawa Venture Group, Inc., a wholly owned Yokogawa subsidiary. The press release is available at: <http://www.yokogawa.com/pr/news/2016/pr-news-2016-0107-en.htm>.
